V0 Stealth Skirts Mods and Fixes

The original mod is in [VoronUser repo](#).

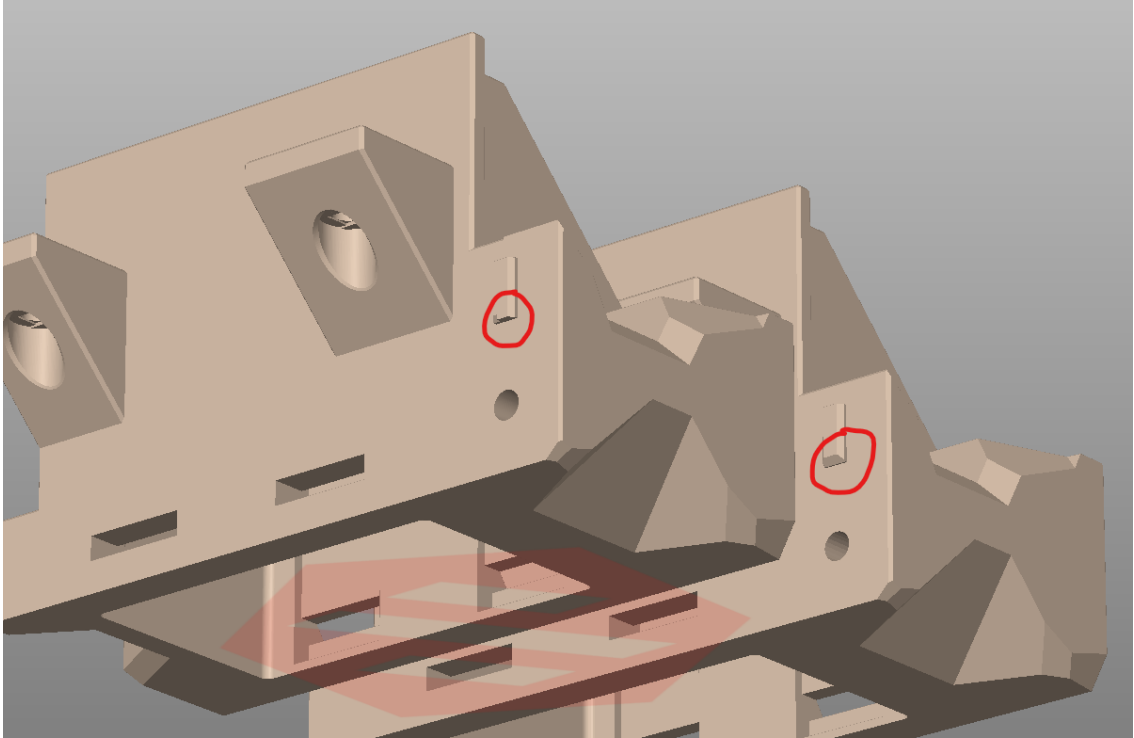

At the time of writing these fixes and mods are available in [this pull request](#) at Maverick-3D's repo pending to be merged.

Only the parts that was changed are included here. Download the rest you need from VoronUser repo.

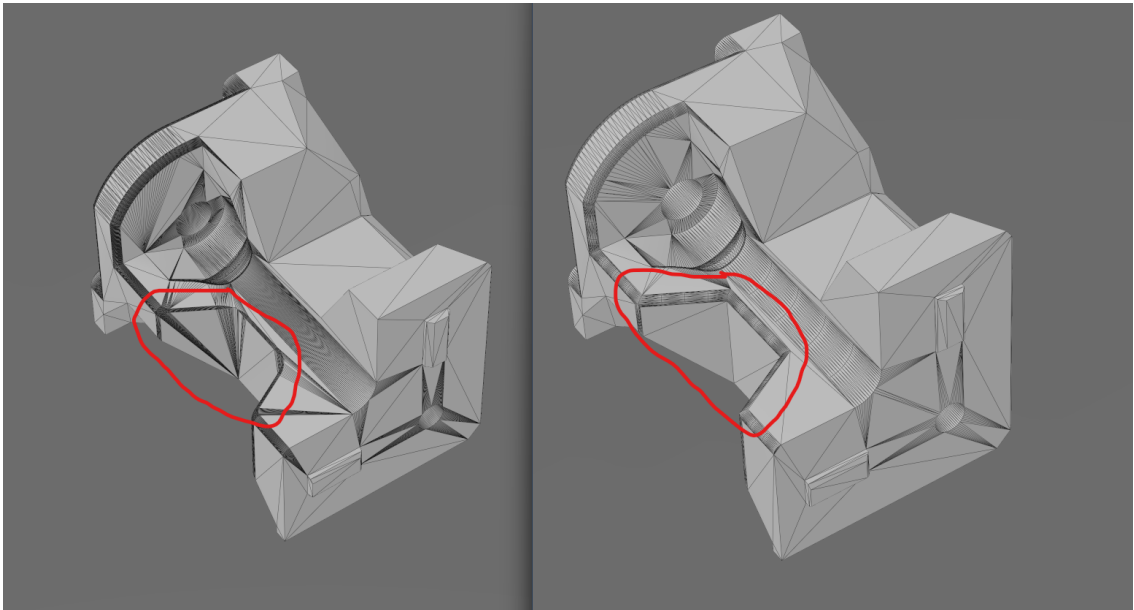

Fixes:

- Added the STLs of the foot accent piece ([a]_Foot_Accent_{A,B}_x2.stl)

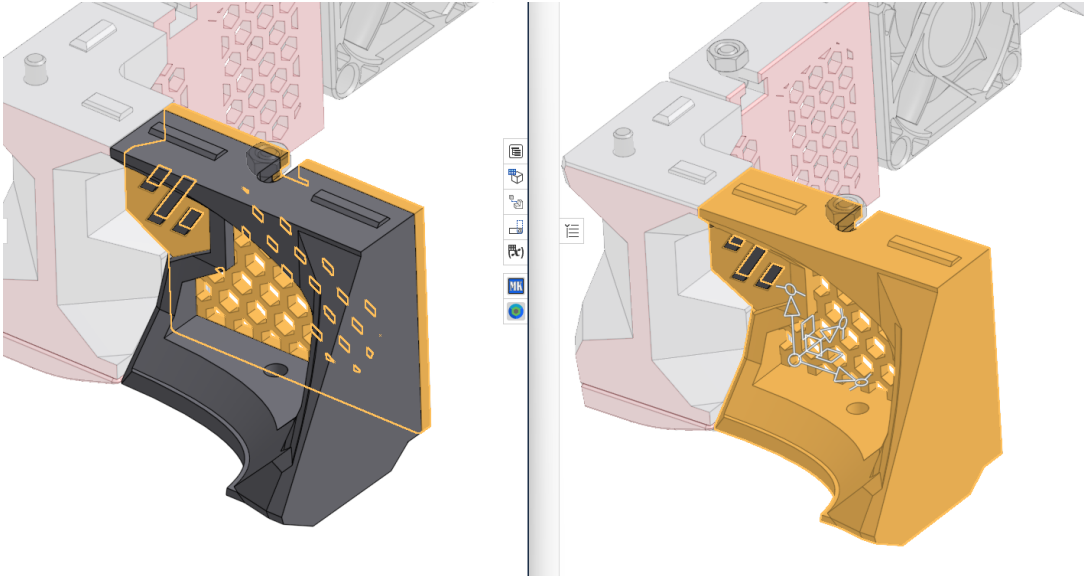

- Fixed several chamfers and overhang issues

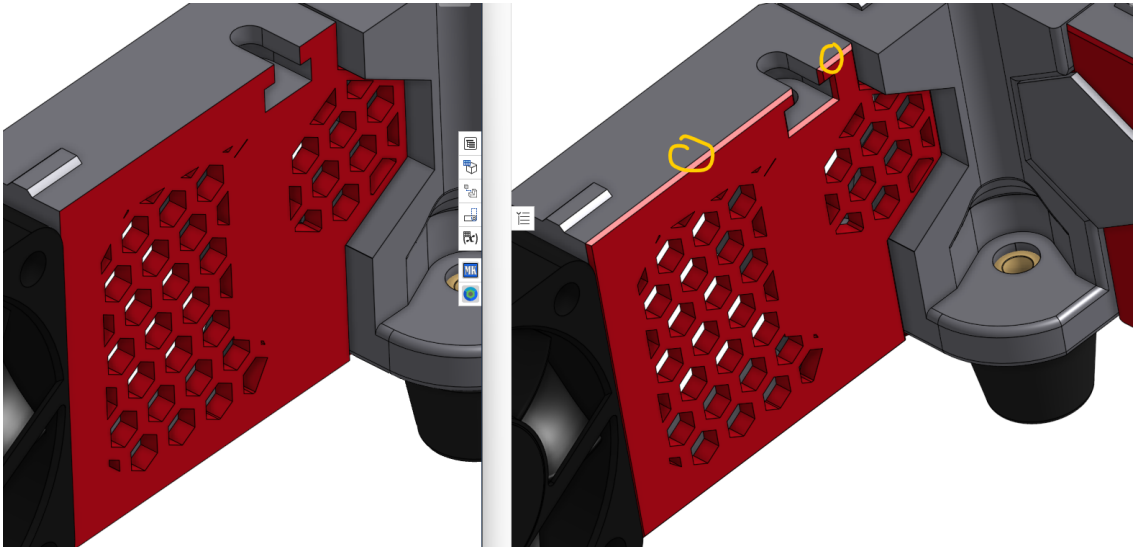

- Fixes some broken fillets

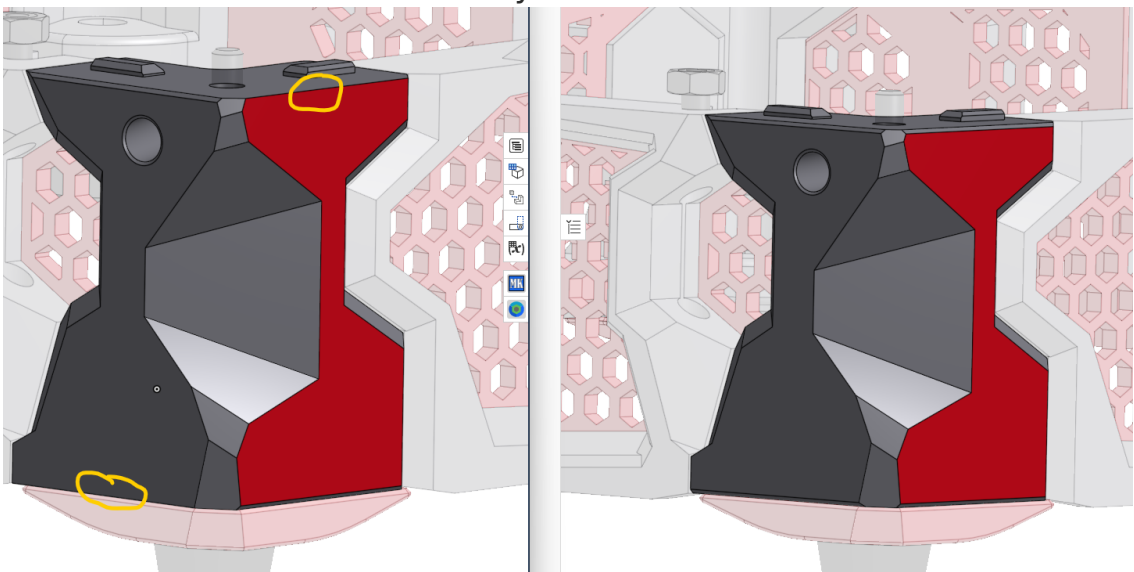

- Merged the front skirt pieces into one part in CAD

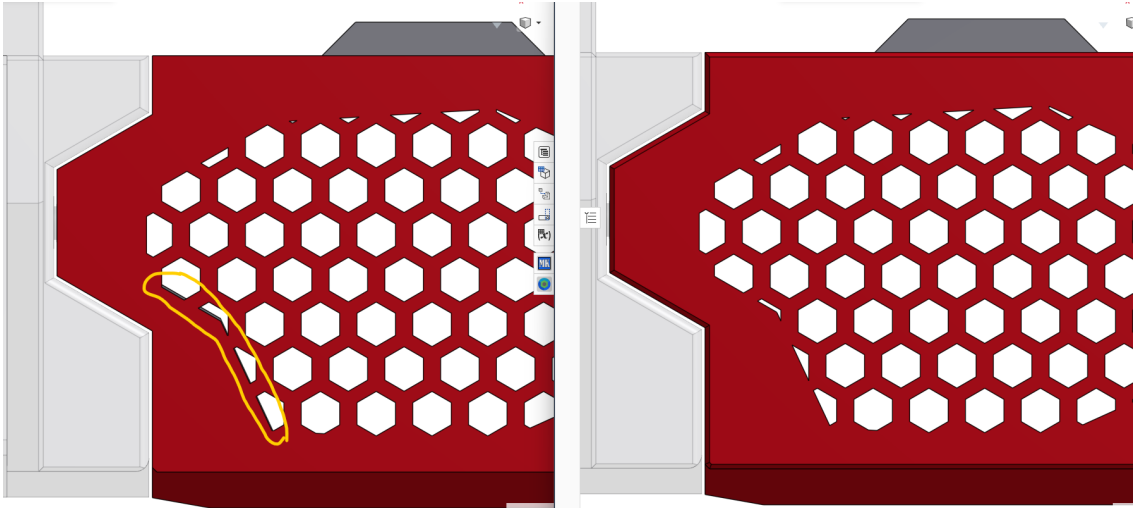

- Added 0.4mm chamfers to the edges facing the build plate to minimize the effect of elephant foot on all skirt pieces.

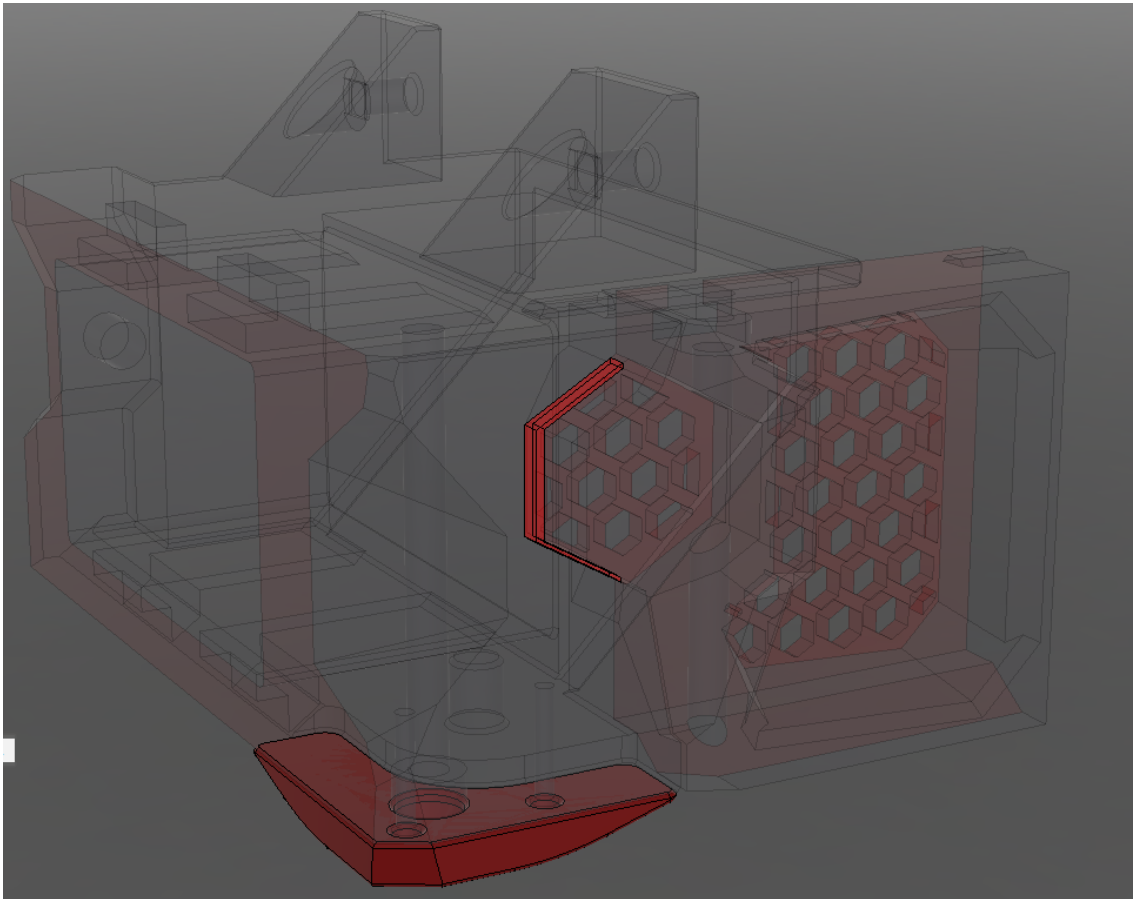

- Make the chamfers at the feet symmetric and consistent

- Fixed overhangs over the hex grids on the rear skirt

- Fixed the cutout of the half-hexagon at mains inlet foot causing interference with the neighboring left skirt piece

Mods:

- Split the rear skirt into two pieces so they can be printed on a V0 easier (use an extra M3x6 screw and a heatset insert to connect them)
UPDATE: **The one-piece rear skirt can fit on a V0 print bed by rotating 45 degrees.** It's just a bit tight.

- Added another mains inlet foot that uses the same mounting nuts as V0.1, so you don't need to add extra nuts when upgrading from V0.1
